GATE 2018

Computer Science & Information Technology

Questions

1. In a party, 60% of the invited guests are male and 40% are female. If 80% of the invited guests attended the party and if all the invited female guests attended, what would be the ratio of males to females among the attendees in the party?

A. 2 : 3   B. 1 : 1

C. 3 : 2   D. 2 : 1

2. A six-sided unbiased die with four green faces and two red faces is rolled seven times. Which of the following combinations is the most likely outcome of the experiment?

A. Three green faces and four red faces.

B. Four green faces and three red faces.

C. Five green faces and two red faces.

D. Six green faces and one red face.

3. In the figure below, $\angle DEC + \angle BFC$ is equal to _____.
A. $\angle BCD - \angle BAD$ B. $\angle BAD + \angle BCF$

C. $\angle BAD + \angle BCD$ D. $\angle CBA + \angle ADC$

4. In appreciation of the social improvements completed in a town, a wealthy philanthropist decided to gift Rs 750 to each male senior citizen in the town and Rs 1000 to each female senior citizen. Altogether, there were 300 senior citizens eligible for this gift. However, only 8/9th of the eligible men and 2/3rd of the eligible women claimed the gift. How much money (in Rupees) did the philanthropist give away in total?

A. 1,50,000   B. 2,00,000

C. 1,75,000   D. 1,51,000

5. In $pqr \neq 0$ and $p^{-x} = \dfrac{1}{q}, q^{-y} = \dfrac{1}{r}, r^{-z} = \dfrac{1}{p}$, what is the value of the product xyz ?

A. -1   B. $\dfrac{1}{pqr}$

C. 1   D. pqr

6. The area of a square is d. What is the area of the circle which has the diagonal of the square as its diameter?

A. πd   B. πd²

C. πd²/4   D. πd/2

7. "A _____ investigation can sometimes yield new facts, but typically organized ones are more successful."

A. meandering   B. timely

C. consistent   D. systematic

8. What would be the smallest natural number which when divided either by 20 or by 42 or by 76 leaves a remainder of 7 in each case?

A. 3047   B. 6047

C. 7987   D. 63847

**9.** "From where are they bringing their books? _____ bringing _____ books from _____."

The words that best fill the blanks in the above sentence are

A. Their, they're there

B. They're, their, there

C. There, their, they're

D. They're, there, there

10. What is the missing number in the following sequence?

2, 12, 60, 240, 720, 1440, _____, 0

A. 2880   B. 1440

C. 720   D. 0

TECHNICAL

1. Which one of the following statements is FALSE?
A. Context-free grammar can be used to specify both lexical and syntax rules.
B. Type checking is done before parsing.
C. High-level language programs can be translated to different Intermediate Representations.
D. Arguments to a function can be passed using the program stack.

2. A queue is implemented using a non-circular singly linked list. The queue has a head pointer and tail pointer, as shown in the figure. Let n denote of the number of nodes in the queue. Let enqueue be implemented by interesting a new node at the head and dequeue be implemented by deletion of a node from the tail.
Which one of the following is the time complexity of the most time-efficient implementation of enqueue and dequeue, respectively, for this data structure?

A. $\theta(1), \theta(1)$ B. $\theta(1), \theta(n)$

C. $\theta(n), \theta(1)$ D. $\theta(n), \theta(n)$

3. The set of all recursively enumerable languages is
A. closed under complementation
B. closed under intersection
C. a subset of the set of all recursive languages
D. an uncountable set

4. Consider the following processor design characteristics:
I. Register-to-register arithmetic operations only.
II. Fixed-length instruction format.
III. Hardwired control unit.
Which of the characteristics above are used in the design of a RISC processor?
A. I and II only   B. II and III only
C. I and III only   D. I, II and III

5. Let N be an NFA with n states. Let k be the number of states of a minimal DFA which is equivalent to N. Which one of the following is necessarily true?

A. $k \geq 2^n$ B. $k \geq n$

C. $k \leq n^2$ D. $k \leq 2^n$

6. Match the following :
Field
P. UDP Header's Port Number
Q. Ethernet MAC Address
R. IPv6 Next Header
S. TCP Header's Sequence Number
Length in bits
I. 48
II. 8
III. 32
IV. 16
A. P-III, Q-IV, R-II, S-I
B. P-II, Q-I, R-IV, S-III
C. P-IV, Q-I, R-II, S-III
D. P-IV, Q-I, R-III, S-II

7. Consider a process executing on an operating system that uses demand paging. The average time for a memory access in the system is M units if the corresponding memory page is available in memory and D units if the memory access causes a page fault. It has been experimentally measured that the average time taken for a memory access in the process is X units.
Which one of the following is the correct expression for the page fault. It has been experimentally measured that the average time taken for a memory access in the process is X units.
Which one of the following is the correct expression for the page fault rate experienced by the process?

A. $(D-M)/(X-M)$ B. $(X-M)/(D-M)$

C. $(D-X)/(D-M)$ D. $(X-M)/(D-X)$

8. Consider the following two tables and four queries in SQL.

Book (isbn, bname), Stock (isbn, copies)

Query 1:   SELECT B.isbn, S.copies
FROM BOOK B INNER JOIN Stock S
ON B.isbn = S.isbn;
Query 2:   SELECT B.isbn, S.copies
FROM BOOK B LEFT OUTER JOIN Stock S
ON B.isbn=S.isbn;
Query 3:   SELECT B.isbn, S.copies
FROM BOOk B RIGHT OUTER JOIN Stock S
ON B.isbn = S.isbn;

Query 4:   SELECT B.isbn, S.copies
FROM BOOk B FULL OUTER JOIN Stock S
ON B.isbn = S.isbn;
Which one of the queries above is certain to have an output that is superset of the outputs of the other three queries?
A. Query 1
B. Query 2
C. Query 3
D. Query 4

9.   Consider the following statements regarding the slow start phase of the TCP congestion control algorithm. Note the cwnd stands for the TCP congestion window and MSS denotes the Maximum Segment Size.
i. The cwnd increases by 2 MSS on every successful acknowledgement.
ii. The cwnd approximately doubles on every successful acknowledgment.
iii. The cwnd increases by 1 MSS every round trip time.
iv. The cwnd approximately doubles every round trip time.
Which one of the following is correct?
A. Only ii and iii are true
B. Only i and iii are true
C. Only iv is true
D. Only i and iv are true

10.   The following are some events that occur after a device controller issues an interrupt while process L is under execution.
(P) The processor pushes the process status of L onto the control stack.
(Q) The processor finishes the execution of the current instruction.
(R) The processor executes the interrupt service routine.
(S) The processor pops the process status of L from the control stack.
(T) The processor loads the new PC value based on the interrupt.
Which one of the following is the correct order in which the events above occur?
A. QPTRS
B. PTRSQ
C. TRPQS
D. QTPRS

11.   Consider the following C program:

```
#include<stdio.h>
struct ournode{
    char x,y,z;
};

int main()
{
    struct ournode q[] = { '1', '0', 'a'+2};
    struct ournode *p = q;
    printf("%c, %c", *((char*)q+1),
*((char*)q+2));

}
```
The output of this program is :
A. 0, c
B. 0, a + 2
C. '0', 'a + 2'
D. '0', 'c'

12.   In an Entity-Relationship (ER) model, suppose R is a many-to-one relationship from entity set E1 to entity set E2. Assume that E1 and E2 participate totally in R and that the cardinality of E1 is greater than the cardinality of E2. Which one of the following is true about R?
A. Every entity in E1 is associated with exactly one entity in E2.
B. Some entity in E1 is associated with more than one entity in E2.
C. Every entity in E2 is associated with exactly one entity in E1.

4

D. Every entity in 2 is associated with at most one entity in E1.

13. Which one of the following is a closed form expression for the generating function of the sequence $\{a_n\}$, where $a_n = 2n+3$ for all $n = 0,1,2,\ldots\ldots$?

A. $\dfrac{3}{(1-x)^2}$

B. $\dfrac{3x}{(1-x)^2}$

C. $\dfrac{2-x}{(1-x)^2}$

D. $\dfrac{3-x}{(1-x)^2}$

14. Let $\oplus$ and $\odot$ denote the Exclusive OR and Exclusive NOR operations, respectively. Which one of the following is NOT CORRECT?

A. $\overline{P \oplus Q} = P \odot Q$

B. $\overline{P} \oplus Q = P \odot Q$

C. $\overline{P} \oplus \overline{Q} = P \oplus Q$

D. $(P \oplus \bar{P}) \oplus Q = (P \odot \bar{P}) \odot \bar{Q}$

15. Consider the following C program:
```
##inlude<stdio.h>
int calc (int a, int b) {
int c, counter = 0;
counter++;
if (b = = 3) return (a*a*a);
else {
c = calc (a, b/3);
return (c*c*c);
}
}
int main () {
calc (4, 81);
printf("%d",counter);
}
```
The output of this program is _____.

16. Consider a matrix A = uV^T where $u = \begin{pmatrix} 1 \\ 2 \end{pmatrix}, V = \begin{pmatrix} 1 \\ 1 \end{pmatrix}$ Note that V^T denotes the transpose of V. The largest eigenvalue of A is _____.

17. Consider a system with 3 processes that share 4 instances of the same resource type. Each process can request a maximum of K instances. Resource instances can be requested and released only one at a time. The largest value of K that will always avoid deadlock is _____.

18. Let G be a finite group on 84 elements. The size of a largest possible proper subgroup of G is _____.

19. The postorder traversal of a binary tree is 8, 9, 6, 7, 4, 5, 2, 3,1 The inorder traversal of the same tree is 8, 6, 9, 4, 7, 2, 5, 1, 3. The height of a tree is the length of longest path from the root to any leaf. The height of the binary tree above is _____.

20. Two people, P and Q, decide to independently roll two identical dice, each with 6 faces. The person with the lower number wins. In case of a tie, they roll the dice repeatedly until there is no tie. Define a trial as a throw of the dice by P and Q. Assume that all 6 numbers on each dice are equiprobable and that all trials are independent. The probability (rounded to 3 decimal places) that one of them wins in the third trial is _____.

21. The value of $\int_{0}^{\pi/4} x\cos\left(x^2\right)dx$ correct to three decimal places (assuming that ∏ = 3.14) is _____.

22. The chromatic number of the following graph is _____.
23. A 32-bit wide main memory unit with a capacity of 1 GB is built using 256 M × 4-bit. DRAM chips. The number of rows of memory cells in the DRAM chip is 2^{14}. The time taken to perform one refresh

operation is 50 nanoseconds. The refresh period is 2 milliseconds. The percentage (rounded to the closest integer) of the time available for performing the memory read/write operations in the main memory unit is _____.

24. Consider the sequential circuit shown in the figure, where both flip-flops used are positive edge-triggered D flip-flops.
The number of states in the state transition diagram of the circuit that have a transition back to the same state on some value of "in" is _____.

25. Consider a long-lived TCP session with an end-to-end bandwidth of 1 Gbps (= 10^9 bits-per-second). The session starts with a certain sequence number. The minimum time (in seconds, rounded to the closest integer) before this sequence number can be used again is _____.

26. Consider a storage disk with 4 platters (numbered as 0, 1, 2 and 3), 200 cylinders (numbered as 0, 1, …., 199) and 256 sectors per track (numbered as 0,1, ….., 255). The following 6 disk requests of the form [sector number, cylinder number, platter number] are received by the disk controller at the same time:
[120, 72, 2], [180, 134, 1], [60, 20, 0], [60, 20, 0], [212, 86, 3], [56, 116, 2], [118, 16, 1]
Currently the head is positioned at sector number 100 of cylinder 80 and is moving towards higher cylinder numbers. The average power dissipation in moving the head over 100 cylinders is 20 milliwatts and for reversing the direction of the head movement once is 15 milliwatts. Power dissipation associated with rotational latency and switching of head between different platters is negligible.
The total power consumption in milliwatts to satisfy all of the above disk requests using the

Shortest Seek Time First disk scheduling algorithm is _____.

27. A processor has 16 integer registers (R0, R1, …… R15) and 64 floating point registers (F0, F1, ……, F63). It uses a 2-byte instruction format. There are four categories of instructions: Type-1, Type-2, Type-3 and Type-4. Type-1 category consists of four instructions, each with 3 integer register operands (3Rs). Type-2 category consists of eight instructions, each with 2 floating point register operands (2Fs). Type-3 category consists of fourteen instructions, each with one integer register operand and one floating point register operand (1R + 1F). Type-4 category consists of N instructions, each with a floating-point register operand (1F).
The maximum value of N is _____.

28. Consider the following undirected graph G:
Choose a value of x that will maximize the number of minimum weight spanning trees (MWSTs) of G. The number of MWSTs of G for this value of x is _____.

29. Consider the minterm list form of a Boolean function F given below:
$F(P,Q,R,S)= \Sigma m(0,2,5,7,9,11)+ d(3,8,10,12,14)$

Here, m denotes a minterm and d denotes a don't care term. The number of essential prime implicants of the function F is _____.

30. The instruction pipeline of a RISC processor has the following stages. Instruction Fetch (IF), Instruction Decode (ID), Operand Fetch (OF), Perform Operation (PO) and Writeback (WB). The IF, ID, OF and WB stages take 1 clock cycle each for every instruction. Consider a sequence of 100 instructions. In the PO stage, 40 instructions take

3 clock cycles each, 35 instructions take 2 clock cycles each, and the remaining 25 instructions take 1 clock cycle each. assume that there are no data hazards and no control hazards. The number of clock cycles required for completion of execution of the sequence of instructions is _____.

31. Let G be a graph with 100! vertices, with each vertex labeled by a distinct permutation of the numbers 1, 2, ….100. There is an edge between vertices u and v if and only if the label of u can be obtained by swapping two adjacent numbers in the label of v. Let y denote the degree of a vertex in G and z denote the number of connected components in G.
Then, $y + 10z = $ _____.

32. Given a language L, define L′ as follows:
$$L^0 = \{\in\}$$
$L^i = L^{i-1}.L$ for all $i > 0$
The order of a language L is defined as the smallest k such that $L^k = L^{k+1}$ Consider the language L_1 (over alphabet 0) accepted by the following automaton.
The order of L_1 is _____.

33. The number of possible min-heaps containing each value from {1, 2, 3, 4, 5, 6, 7} exactly once is _____.

34. Consider a simple communication system where multiple nodes are connected by a shared broadcast medium (like Ethernet or wireless). The nodes in the system use the following carrier-sense based medium access protocol. A node that receives a packet to transmit will carrier-sense the medium for 5 units of time. If the node does not detect any other transmission in this duration, it starts transmitting its packet in the next time unit. If the node detects another transmission, it waits until this other transmission finishes, and then begins to carrier-sense for 5 time units again. Once they start to transmit, nodes do not perform any collision detection and continue transmission even if a collision occurs. All transmissions last for 20 units of time. Assume that the transmission signal travels at the speed of 10 meters per unit time in the medium. Assume that the system has two nodes P and Q, located at a distance d meters from each other. P starts transmitting a packet at time $t = 0$ after successfully completing its carrier-sense phase. Node Q has a packet to transmit at time $t = 0$ and begins to carrier-sense the medium.
The maximum distance *d* (in meters, rounded to the closest integer) that allows Q to successfully avoid a collision between its proposed transmission and P's ongoing transmission is _____.

35. Consider the weights and values of items listed below. Note that there is only one unit of each item.

Item Number	Weight in (Kgs)	Value in (Rupees)
1	10	60
2	7	28
3	4	20
4	2	24

The task is to pick a subset of these items such that their total weight is not more than 11 kgs and their total value is maximized. Moreover, no item may be split. The total value of items picked by an optimal algorithm is denoted by V_{opt}. A greedy algorithm sorts the items by their value-to-weight ratios in descending order and packs them greedily, starting from the first item in the ordered list. The total value of items picked by the greedy algorithm is denoted by V_{qreedy}.
The value of $V_{opt} - V_{qreedy}$ is _____.

36. Consider the following program written in pseudo-code. Assume that x and y are integers:
Count (x, y) {

```
if (y ! = 1) {
if (x ! = 1) {
print("*");
Count (x/2, y);
}
else {
y = y − 1;
Count (1024, y);
}
}
}
```

The number of times that the print statement is executed by the call Count (1024, 1024) is _____.

37. Consider Guwahati (G) and Delhi (D) whose temperatures can be classified as High (H), medium (M) and low (L). Let $P(H_G)$ denote the probability that Guwahati has High temperature. Similarly, $P(M_G)$ and $P(L_G)$ denotes the probability of Guwahati having medium and low temperatures respectively. Similarly, we use $P(H_D)$, $P(M_D)$ and $P(H_D)$ for Delhi.

The following table gives the conditional probabilities for Delhi's temperature given Guwahati's temperature.

	H_D	M_D	L_D
H_G	0.40	0.48	0.12
M_G	0.10	0.65	0.25
L_G	0.01	0.50	0.49

Consider the first row in the table above. The first entry denotes that if Guwahati has high temperature (H_G) then the probability of Delhi also having a high temperature (H_D) is 0.40; i.e., $P(H_D)|H_G)=0.40$. Similarly, the next two entries are $P(M_D)|H_G)=0.48$ and $P(L_D)|H_G)=0.12$. Similarly for the other rows.

If it is known that $P(H_G)=0.2$, $P(M_G)=0.5$ and $P(L_G)=0.3$, then the probability (correct to two decimal places) that Guwahati has high temperature given that Delhi has high temperature is _____.

38. Consider an IP packet with a length of 4,500 bytes that includes a 20-byte IPv4 header and a 40-byte TCP header. The packet is forwarded to an IPv4 router that supports a Maximum Transmission Unit (MTU) of 600 bytes. Assume that the length of the IP header in all the outgoing fragments of this packet is 20 bytes. Assume that the fragmentation offset value stored in the first fragment is 0.

The fragmentation offset value stored in the third fragment is _____ .

39. Consider a matrix P whose only eigenvectors are the multiples of $\dfrac{1}{4}$.

Consider the following statements :
I. P does not have an inverse.
II. P has a repeated eigenvalue.
III. P cannot be diagonalized.
Which one of the following options is correct?
A. Only I and II are necessarily true
B. Only II is necessarily true
C. Only I and III are necessarily true
D. Only II and III are necessarily true

40. Consider the following languages:
I. $\{a^m b^n c^p d^q \mid m+p=n+q$, where m,

$m, n, p, q \geq 0\}$

II. $\{a^m b^n c^p d^q \mid m=n$ and $p=q$, where

$m, n, p, q \geq 0\}$

III.

$\{a^m b^n c^p d^q \mid m=n=p$ and $p \neq q$, where

$m, n, p, q \geq 0\}$

IV. $\{a^m b^n c^p d^q \mid mn=p+q$

where $m, n, p, q \geq 0\}$

Which of the language above are context-free?
A. I and IV only   B. I and II only
C. II and III only   D. II and IV only

41. Consider the following C code. Assume that unsigned long int type length is 64 bits.

```
unsigned long int fun (unsigned long int n)
{
```

```
unsigned long int i, j = 0, sum = 0;
for (i = n; i > 1; i = i/2) j++;
for (; j > 1; j = j/2) sum++;
return (sum);
}
```
The value returned when we call fun with the input 2^{40} is

A. 4   B. 5

C. 6   D. 40

42. Consider the relations r (A, B) and s(B, C) where s.B is a primary key and r.B is a foreign key referencing s.B Consider the query

Q: $r \bowtie (\sigma_{B<5}(S))$

Let LOJ denote the natural left outer-join operation. Assume that r and s contain no null values.

Which one of the following queries is NOT equivalent to Q?

A. $\sigma_{B<5}(r\bowtie S)$ B. $\sigma_{B<5}(r\ LOJ\ s)$

C. $r\ LOJ(\sigma_{B<5}(s))$ D. $\sigma_{B<5}(r)LOJ\ s$

43. In a system, there are three types of resources: E, F and G. Four processes P_0, P_1, P_2 and P_3 execute concurrently. At the outset, the processes have declared their maximum resource requirements using a matrix named Max as given below. For example Max [P2, F] is the maximum number of instances of F that P_2 would require. The number of instances of the resources allocated to the various processes at any given state is given by a matrix named Allocation. Consider a state of the system with the Allocation matrix as shown below and in which 3 instances of E and 3 instances of F are the only resources available.

Allocation			
	E	F	G
P_0	1	0	1
P_1	1	1	2
P_2	1	0	3
P_3	2	0	0

Max			
	E	F	G
P_0	4	3	1
P_1	2	1	4
P_2	1	3	3
P_3	5	4	1

From the perspective of deadlock avoidance, which one of the following is true?

A. The system is in safe state.

B. The system is not in safe state, but would be safe if one more instance of E were available.

C. The system is not in safe state, but would be safe if one more instance of F were available.

D. The system is not in safe state, but would be safe if one more instance of G were available.

44. Assume that multiplying a matrix G_1 of dimension p×q with another matrix G_2 of dimension q×r requires scalar multiplications. Computing the product of n matrices $G_1G_2G_3…G_n$ can be done by parenthesizing in different ways. Define G_iG_{i+1} as an explicitly computed pair for a given parenthesization if they are directly multiplied. For example, in the matrix multiplication chain $G_1G_2G_3G_4G_5G_6$ using parenthesization $\left(G_1\left(G_2G_3\right)\right)\left(G_4\left(G_5G_6\right)\right)\cdot G_2G_3$ and G_5G_6 are the only explicitly computed pairs. Consider a matrix multiplication chain $F_1F_2F_3F_4F_5$ where matrices F_1,F_2,F_3,F_4 and F_5 are of dimensions 2×25, 25×3, 3×16, 16×1 and 1×1000 respectively. In the parenthesization of $F_1F_2F_3F_4F_5$ that minimizes the total number of scalar multiplications, the explicitly computed pairs is/are

A. F_1F_2 and F_3F_4 only   B. F_2F_3 only

C. F_3F_4 only   D. F_1F_2 and F_4F_5 only

45. Consider the following parse tree for the expression a#bcd#e#f, involving two binary operators $ and #.
Which one of the following is correct for the given parse tree?

A. $ has higher precedence and is left associative; # is right associative

B. # has higher precedence and is left

associative; $ is right associative
C. $ has higher precedence and is left associative; # is left associative
D. # has higher precedence and is right associative; $ is left associative

46. Consider the following solution to the producer-consumer synchronization problem. The shared buffer size is N. Three semaphores empty, full and mutex are defined with respective initial values of 0, N and 1. Semaphore empty denotes the number of available slots in the buffer, for the consumer to read from. Semaphore full denotes the number of available slots in the buffer, for the producer to write to. The placeholder variables, denoted by P, Q, R and S, in the code below can be assigned either empty or full. The valid semaphore operations are: wait ( ) and signal ( ).

Producer	Consumer
do {	do {
wait (P);	wait (R);
wait (mutex);	wait (mutex);
//Add item to buffer	//Consume item from buffer
Signal (mutex);	Signal (mutex);
Signal (Q);	Signal (S);
} while (1);	} while (1);

Which one of the following assignments to P, Q, R and S will yield the correct solution?
A. P : full, Q: full, R: empty, S; empty
B. P: empty, Q: empty, R: full, S: full
C. P: full, Q: empty, R: empty, S: full
D. P: empty, Q: full, R: full, S: empty

47. A lexical analyzer uses the following patterns to recognize three tokens T_1, T_2 and T_3 over the alphabet {a, b, c}.

T_1: a? (b | c) * a
T_2: b? (a | c) * b
T_3: c? (b | a) * c

Note that 'x?' means 0 or 1 occurrence of the symbol x. Note also that the analyzer outputs the token that matches the longest possible prefix.
If the string bbaacabc is processed by the analyzer, which one of the following is the sequence of tokens it outputs?
A. $T_1T_2T_3$ B. $T_1T_1T_3$
C. $T_2T_1T_3$ D. T_3T_3

48. Consider the unsigned 8-bit fixed point binary number representation below :
$b_7 b_6 b_5 b_4 b_3.b_2 b_1 b_0$
where the position of the binary point is between b_3 and b_2 Assume b_7 is the most significant bit. Some of the decimal numbers listed below cannot be represented exactly in the above representation:
i. 31.500   ii. 0.875
iii. 12.100 iv. 3.001
Which one of the following statements is true?
A. None of (i), (ii), (iii), (iv) can be exactly represented.
B. Only (ii) cannot be exactly represented.
C. Only (iii) and (iv) cannot be exactly represented.
D. Only (i) and (ii) cannot be exactly represented.

49. Let N be the set of natural numbers. Consider the following sets:
P. Set of rational numbers (positive and negative).
Q. Set of functions from {0, 1} to N.
R. Set of functions from N to {0, 1}.
S. Set of finite subsets of N.
Which of the sets above are countable?
A. Q and S only   B. P and S only
C. P and R only   D. P, Q and S only

50. Consider the following C program:

```
#include <stdio.h>
void fun 1 (char *s1, char *s2) {
char *tmp;
tmp = s1;
s1 = s2;
s2 = tmp;
}
Void fun2 (char **s1, char **s2) {
char *tmp;
tmp = *s1;
*s1 = *s2;
*s2 = tmp;
}
int main () {
char *str1 = "Hi", *str2 = "Bye";
fun1 (str1, str2);
```

```
printf("%s %s", str1, str2);
fun2 (&str1, &str2);
printf("%s %s", str1, str2);
return 0;
}
```
The output of the program above is

A. Hi Bye Hi   B. Hi Bye Hi Bye

C. Bye Hi Hi Bye   D. Bye Hi Bye Hi

51. Consider the first-order logic sentence:

$\phi = \exists s \exists t \exists u \forall v \forall w \forall x \forall y \Psi (s,t,u,v,w,x,y)$ where

$\Psi (s,t,u,v,w,x,y)$ is a quantifier-free-order

logic formula using only predicate symbols and possibly equality, but no function symbols. Suppose φ has a model with a universe containing 7 elements.

Which one of the following statements is necessarily true?

A. There exists at least one model of φ with universe of size less than or equal to 3.

B. There exists no model of φ with universe of size less than or equal to 3.

C. There exists no model of φ with universe of size greater than 7.

D. Every model of φ has a universe of size equal to 7.

52. Let G be a simple undirected graph. Let T_D be a depth first search tree of G. Let T_B be a breadth first search tree of G. Consider the following statements:

I. No edge of G is a cross edge with respect to T_D. (A cross edge in G is between two nodes neither of which is an ancestor of the other in T_D).

II. For every edge (u, v) of G, if u is at depth i and v is at depth j in T_B, then $|i–j| = 1$

Which of the statements above must necessarily be true?

A. I only   B. II only

C. Both I and II   D. Neither I nor II

53. The size of the physical address space of a processor is 2^P bytes. The word length is 2^W bytes. The capacity of cache memory is 2^N

bytes, the size of each cache block is 2^M words. For a K-way set-associative cache memory, the length (in number of bits) of the tag field is

A. $P – N – \log_2 K$

B. $P – N + \log_2 K$

C. $P – N – M – W – \log_2 K$

D. $P – N – M – W + \log_2 K$

54. Consider the following problems L(G) denotes the language generated by a grammar G. L(M) denotes the language accepted by a machine M.

I. For an unrestricted grammar G and a string w, where $W \in L(G)$.

II. Given a Turing Machine M, whether L(M) is regular.

III. Given two grammars G_1 and G_2, whether $L(G_1) = L(G_2)$

IV. Given an NFA N, whether there is a deterministic PDA P such that N and P accept the same language.

Which one of the following statements is correct?

A. Only I and II are undecidable

B. Only III is undecidable

C. Only II and IV are undecidable

D. Only I, II and III are undecidable

55. Consider the following four relational schemas. For each schema, all non-trivial functional dependencies are listed. The underlined attributes are the respective primary keys.

Schema I : Registration (<u>rollno</u>, courses)

Field 'courses' is a set-valued attribute containing the set of courses a student has registered for.

rollno → courses

Schema II : Registration (rollno, courseid, email)

Non-trivial functional dependencies:

rollno, courseid → email

email → rollno

Schema III : Registration (<u>rollno, courseid, marks, grade</u>)

Non-trivial functional dependencies:

rollno, courseid → marks, grade

marks → grade

11

Schema IV : Registration (<u>rollno, courseid,</u> credit)
Non-trivial functional dependencies:
rollno, courseid → credit
courseid → credit

Which one of the relational schemas above is in 3NF but not in BCNF?
A. Schema I
B. Schema II
C. Schema III
D. Schema IV

****

Benefits of Online Classroom Program

1. GATE Learning Tablet
  › Access high-quality classes at your convenience, anywhere and anytime with the tablet

2. Live Classroom Sessions
  › Get Access to Live Classes By India's Leading GATE Faculty

3. Previous Year Question Books
  › 20+ Years PYQs with Solutions

4. Workbooks
  › Access to 3000+ Practice Questions with solutions

5. Regular Quizzes
  › Sample Quizzes for daily practice and regular tests along with live class

6. Doubt Resolution
  › Complete Doubt Resolution within 24 hours by Subject Experts

Additional Offerings

› **Test Series -** Mock Tests based on GATE Exam pattern

› **Preparation Guidance -** Get a competitive advantage from our Experts

› **Subject wise formula Notes -** Comprehensive short notes for Revision

› **Report Card -** Regular performance analysis along with Live Class
